

Please reject tne NAB petition 04-160. As an avid fan and supporter of XM satellite radio, I am pleased with the service I gladly pay for. The travel and weather information is especially useful in its timeliness. On standard commercial stations I have to suffer several minutes of commercials and idle chatter before receiving an abbreviated version of a traffic report. With satellite information, I can receive the instant information I require when driving.

The attempt to deny me the right to receive the information I am paying for will extend to the ballot box. Should I be denied the right to receive these broadcasts, I vow to organize like minded supporters to bring a change to the FCC in November.
